Deposits	\$ 789,555	\$ 779,803
Accrued expenses and other liabilities	7,229	7,388
Advanced payments by borrowers for taxes and insurance	521	609

What is extensible business reporting language. Inline extensible business reporting language (ixbrl).

Giving companies greater control of telling their story. Historically, analysts and journalists have acted as interpreters of companies' financial information, consuming full-text statements and providing the public with their interpretations. The Business Reporting Language (XBRL) was created in 1998. Most Web pages today use XHTML: The HTML layer includes the Basic text, colors, and images we see, while the metadata later includes all the information that Google and other search engines use to "Scan", understand the content of the page and sort the page. XBRL tags are embedded "in-line" with the text of the traditional HTML document. The U.S. and other global markets have followed a similar path to the mandate format in XBRL format. How do you not select XBRL tags? Who Is Needed To Use XBRL? XBRL allows companies to tell their financial story directly to the public, using consistent tags that allow the public to understand and compare financial information. XBRL uses HTML to place XBRL tags "on the line" in the metadata layer with the visible text. On June 15, 2021, the Securities and Exchange Commission (SEC) requires all US-GAAP and IFRS filers to submit interim and annual reports using inline XBRL format. "To consume and use this information. This comprehensive, standards-based brand helps drive consistency and enable better comparisons both within and between companies to demonstrate financial performance. This includes the 10-K annual form, all 10-Q quarterly forms, as well as any 8-K interim forms. There are two main purposes or taxonomies for the XBRL brand. In response to the 1929 market crash, the SEC drafted the Securities Exchange Act of 1934. Making financial information more publicly available. People do not read financial statements more often, use more data analysis tools to digest and distill the perceptions you're looking for. As a modern web page, XBRL provides machine and human readers with the information they want, all in the same document. Starting at a later date in 2018, the SEC has gradually introduced the requirements for applications to be submitted on XBRL. Learn more about XBRL and other periodic and periodic reporting requirements. XBRL builds on XBRL's key benefits. Make financial information machine-readable. XBRL greatly facilitates the consumption of financial information by data analysis tools. The US-GAAP (Generally Accepted Accounting Principles) taxonomy is used primarily by SunAccounting servers in the US, while the International Financial Reporting Standards (IFRS) taxonomy is used by international data servers in the US, US, and other markets with XBRL requirements. Boosting consistency in financial reporting. XBRL archives must follow the US-GAAP taxonomy or the IFRS taxonomy. What is the benefit of XBRL? Currently, all of this information is digitally available to the public through the EDGAR system. Finally, XBRL takes all these XBRL benefits and closes them with the simplicity and efficiency of creating and archiving a single document. The result is a combined file that is subject to a regulator's review and available to the public through the Electronic Data Gathering, Analysis and Retrieval (EDGAR) program. All reports XBRL is enabled by XHTML (eXtensible Markup Language), which uses HTML (eXtensible Markup Language) and JAMSE (same old odacrem o arap aieporuE edadirotuA A. aniuqAm rop sievAgeI sodadatem ed adamac amu anioicid e The European Electronic Format (ESEF) mandate for the use of XBRL and government agricultural in several world markets are implementing similar XBRL requirements. The XBRL viewer allows human readers to navigate easily, search and filter using the XBRL tags embedded in the document. What is the process of creation and filing XBRL? Previously to inline XBRL, the filers created their traditional PDF or HTML document - and then created a separate XBRL document. In short, XBRL allows filers to prepare a financial report that looks like a traditional financial statement and is attractive to the eyes, but has all the data rich and readable by machine, soaked under the text. A brief history of XBRL dates back to the great depression. By making financial information more legal, XBRL In-Line facilitates this information for people - investors, analysts, etc. The SEC includes an XBRL viewer on the EDGAR system, allowing anyone with a recent standard Internet browser to publicly display available XBRL files directly within the Edgar system. How does XBRL work? Both taxonomies serve as widely accepted guides encoding the XBRL marking principles to ensure consistency and need in the markup. XBRL (INLINE XBRL) is an archiving format that mixes the estate benefits of a human legal HTML file with the XBRL document file legal per machine. XBRL tags function essentially as bars for financial numbers, so computers and analysis tools can instantly ingest this data for immediate analysis and comparison. The act focused on the creation of greater transparency and accountability, requiring publicly negotiated companies to make certain financial information available publicly.
